PROJECTS

EV Charging Station

- Developed an EV Charging Station management system to simplify the process of locating and accessing charging stations.

Energy Storage Arbitrage Optimization using Deep Reinforcement Learning

- Developed an interactive battery energy management system using Dueling DQN and Double DQN to optimize charge/discharge decisions on real electricity-price data, with Random and Price-Based baselines for comparison.
- Built and deployed a Streamlit dashboard supporting Day-Ahead and Actual price scenarios, interactive performance analysis, battery SOC tracking, and live model comparison.

AI-Based Intelligent Ambulance Priority And Authentication System

- Developed a Flask-based ambulance management platform with YOLOv8 patient detection, user authentication, ambulance registration, hospital recommendation, and trip management.
